

Humoral Response After SARS-Cov-2 mRNA Vaccine in a Cohort of Hemodialysis Patients and Kidney Transplant Recipients

JASN
JOURNAL OF THE AMERICAN SOCIETY OF NEPHROLOGY

METHODS

RESULTS

Factors linked to weak humoral response in HD

1. Age > 75 years
2. Low Serum albumin
3. Low Kt/V
4. Non responders to HBV vaccine

CONCLUSION: The humoral response to a SARS-Cov-2 mRNA vaccine is poor in kidney transplant recipients and reduced in patients undergoing hemodialysis compared with healthy controls.
